Powered Industrial Trucks are the backbone of the shipping and receiving departments. We recognize that productivity and safety must work hand in hand. Our course will provide classroom instruction on forklift safety principles. **Operators will review top causes of forklift accidents, stability principles, and daily inspection standards. Special emphasis will be placed on your unique lift equipment and workplace-related issues. Each class participant will take a written test and hands-on instruction is provided for your type of equipment operated at your facility.**

After completing our training program you will:

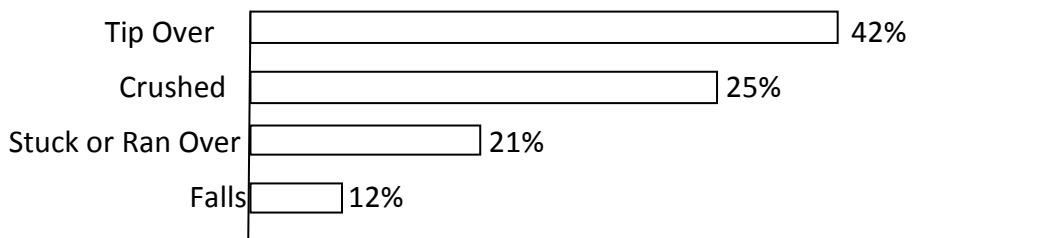

- Have a proper forklift safety plan
- Feel more comfortable, safer and productive when operating your forklift.
- Have all your questions answered and understand the rules to driving a safe, proficient forklift.
- Have the proper documentation that OSHA 29 CFR 1910.178 requires to the employees.

TOP FIVE OSHA CITATIONS
